DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 19, 22, 24-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention because the preambles are not consistent.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maccaferri (US 2,935,152) in view of Wendt (US 6,467,228).

With regards to claims 1-5, 9-12, 18-24, and 27-32, Maccaferri teaches acoustical units comprising a plurality of tile panels T forming rows, each of the tile panels T having body 10 tilted and inclined or tapered across edge walls thus having different thickness or depths, planar surface 14, the tile panels T within the cavity defined and enclosed by edge flanges 11 are arranged in straight rows (first row is parallel with a second row) forming an undulating pattern (figs. 1-3). Maccaferri does not teach expressly the units comprising a plurality of grid members intersecting to form a grid, each of grids having a base and bridge members.

Wendt teaches hinged ceiling panel comprising a plurality of grid members 12 intersecting to form a grid structure 13 and each of the grids having a base member 25, a bridge member 38, ceiling panels 10. (See figs. 1-2). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Maccaferri and Wendt, having the suspended ceiling structures to be installed with the inclined or tapered acoustical panels. The motivation for doing so would have been to provide hanging support for forming the ceiling assembly.

With regards to claims 6-8, 13-17, and 25-26, Maccaferri and Wendt teach the structural elements for the suspended ceiling installed with tapered acoustical sound panels as set forth. Maccaferri and Wendt do not teach specifically the panels are arranged in the same direction, 180-degrees, 90-degrees offset from the first panel to the second panel. It would have been obvious to one of ordinary skill in the art at the time the invention was made to arrange the tapered panels such as in the same direction, 180 and 90-degrees offset from the first panel to the second panel, since it has been held that rearranging parts of an invention involves only routine skill in the art. The motivation for doing so would have been enhance cosmetically appearance.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. McCorkell (US 2,910,738) and Goodworth (US 4,640,064) teach suspended ceiling system.
